PDS FOUNDATION

PDS Foundation offers an industry-leading data staging model, tailored to provide data marts that align seamlessly with your healthcare organization's specific analytical and reporting needs. It uses industry-standard optimized star schema data structuring to facilitate rapid deployment of your organization's preferred analytics software platform.

PDS works with your data warehouse team to implement proven data marts for optimized visual and analytical reporting. Modeled data can be sourced from various applications, including revenue cycle, patient access, clinical, quality, general ledger, and more. Technical documentation is provided including ERD and schema information on the PDS Foundation design, process, and ETL updates to ensure a comprehensive solution.

Key Benefits

- PDS expertise in staging healthcare data accelerates visual dashboard and reporting projects
- Offers proven, timely, best practice data marts for your organization's preferred analytics software platform
- Facilitates rapid deployment for integration with enterprise-wide data warehouse initiatives
- Easily integrates with current data warehouse and ETL processes

Contact PDS today to see how **PDS Foundation** and our 20+ years of experience staging data for healthcare analytics software platforms can benefit your organization.
